

Group 7

Members: Edward Gaston Morgan Hodge Ben Keeping David Penfold
Demonstration Comments
Demo problems, but the video showed the app. The project's aims and objectives are well communicated. Legal issues and accessibility are properly addressed. Design flows and prototypes are clearly explained. Some details of the machine learning models are provided. The communication was good. The understanding of the project was acceptable. A demo of the application was presented successfully. Q: Why do we need a login page here? Q: What actions have been taken to protect the data? There was a problem with the speed of the laptop during the presentation. Note: It should have an option to use it without signing in. Q: Which coding language has been used? Q: Which models? How did you train your models? The students were able to answer the questions. Problem with the demo due to the emulator not able to handle the processing. Reverted to the video. Video shows a good flow though and has been forwarded to the panel as backup reference. I'll put the main contributions from here.
Communication of Information Comments
Team covered the demo problems during the session so it didn't stall too much, and nerves settled by the end. Fairly well prepared, and a good personal appearance. The team effectively communicates the project's rationale, aims, and outcomes. They highlight the key features. The functionality of the app was tested. There was a satisfying reflection of the project's importance and the activities that students engaged in during the module. Project aims and objectives were reviewed. Challenges and issues were presented. Q: Why were the images resized? Best smart dressed group again. It took some time, but when the technical issues started Morgan and Ben jumped in to talk about the less essential items to recover time. This could have been more fluid, but it was a constructive move nevertheless. Body language could be improved, and some members do still seem like they are reading from a script. Please learn to talk to viewers (establish eye contact, address them). I only see Edward doing this.
Additional Comments

Demonstration Marks (50%)	31.00
Communication of Information Marks (50%)	35.75
Total Practice Marks	66.75
