Set of activities to work through during your own time (Android Studio using Java)
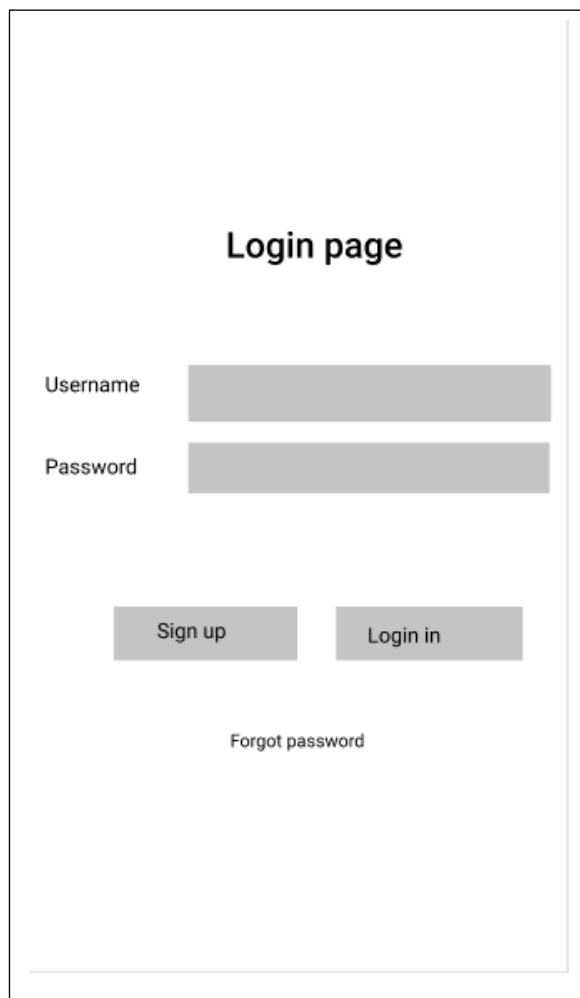

1- **Build a layout for the following user interface:**

2- **Create an Activity to assign the previous layout to it.**
3- **Run your app to see if you get it right? If not, what went wrong?**
   - **Write it down to refer to if you experience same error(s) again.**
4- **Design and implement two UIs separately for each button in the previous interface (Login Page – sign up and login buttons) (use your imagination)**
5- **Design and implement a mobile user interface for a basic calculator.**
